

### Abstract

The invention relates generally to the use of databases. Preferably the invention relates to a method and a system associated with the use of databases with mobile terminals (220). The objective of this invention is to present a method and a system which allows managing a large dynamically changeable set of applications in the mobile Internet. The objectives of the invention are attained by determining user profiles within communities, and the rights for using applications of a community server (201) depends on the profiles of the user within the community. The identity information is preferably maintained in an identity server (202). The invention provides a solution to the problem of managing services and configuration of smart network node in environments where the services and their content data need to be managed remotely from multiple remote sources in a dynamic manner.
